

- ✓ Do you need an immediate and easy access to SAP print lists?
- ✓ Print list creation is time-intensive? It creates severe load on SAP system during working hours?
- ✓ Recreate reports the next day do not guarantee the same result?
- ✓ Many end users run the same reports and so decrease system performance?
- ✓ Reports do not support access to SAP archived data?

PRINTLIST ARCHIVING AUTOMATION FOR SAP

The SAP Printlist Archive Automation is a SAP-based application that archives SAP printlists automatically, based on easy to define scheduling and variant incremented rules.

The archived reports are easily accessible from an Explorer-like structure that offers additional flexibility to define drill-down nodes and related authorizations.

The advantages are tangible

- ✓ time saving for SAP users
- ✓ guarantee that all necessary reports are effectively stored securely with the right content
- ✓ flexible and secured way for printlist retrieval
- ✓ scheduling possibilities

Scheduled printlist archiving eliminates the reporting issues that may arise because of data being archived or deleted from SAP.

The solution consists of external SAP transports compatible with SAP version 4.7 or higher.

Product features

- ✓ **Mass/Periodic archiving** – archiving of reports from past periods/current period with user-defined attributes in the selection screen variant;
- ✓ **User-defined attributes** are automatically assigned to every print list when stored;
- ✓ **Intuitive search** – print lists are logically grouped using user-defined attributes;
- ✓ **Simple customizing** – adding a single entry to the printlist archive customizing enables users to archive thousands of print lists at once;
- ✓ Based on existing SAP **authorization concept**;
- ✓ **Error handling** – automatic detection of archiving errors and notification of the administrator.
